Adding a Timepicker to jQuery UI Datepicker

The timepicker addon adds a timepicker to jQuery UI Datepicker, thus the datepicker and slider components (jQueryUI) are required for using any of these. In addition all datepicker options are still available through the timepicker addon.

If you are interested in contributing to Timepicker Addon please check it out on GitHub. If you do make additions please keep in mind I enjoy tabs over spaces,.. But contributions are welcome in any form.

Subscribe to Blog and Twitter

Subscribe to my blog via email and follow @PracticalWeb on Twitter. I post for nearly every new version, so you know about updates.

Download

Download Timepicker Addon and the required CSS.

Download/Contribute on GitHub (Need the entire repo? Find a bug? See if its fixed here)

If you prefer a hosted CDN there are a couple available: CDNJS, jsDelivr.

Requirements

You also need to include jQuery and jQuery UI with datepicker and slider wigits. You should include them in your page in the following order:

1. jQuery
2. jQueryUI (with datepicker and slider wigits)
3. Timepicker

Version

Version 1.6.3

Last updated on 2016-04-20

jQuery Timepicker Addon is currently available for use in all personal or commercial projects under the MIT license.
